WATERPROOF

36" Black Katara vanity shown  
VN2KAT-36-BK-NT

Task Lighting & Power's Vanity Night Light Kit enhances the bath space and improves night-time visibility with combined LED lighting and a Doppler motion sensor switch. When the Doppler sensor detects motion, a radiant LED glow emanates beneath the vanity.

### EASY TO INSTALL—No electrician needed.

The Doppler motion sensor can be installed inside or beneath the cabinet, completely out of sight, and detects motion up to 15 feet without direct line of sight. Select an illumination duration from 1 minute to 4 minutes on the Doppler sensor switch.
